orkora

COMPANY PROFILE, NOVEMBER 2026

Built from the gaps we watched people work around.

Orkora Technologies Limited builds operating software for African organisations. It began with a question from years of running social investment programmes: how do you prove a decision was fair? Every product since has been built the same way, inside a real organisation, at the point where the work kept breaking.

Orkora Technologies Limited RC 9697234 hello@orkora.events

WHY WE BUILD

Every product starts with a workaround someone should not have needed.

01

The work runs on workarounds.

Most organisations we know run on goodwill and patchwork. The member register lives in a workbook. The money trail lives in WhatsApp screenshots. The decision about who receives a scholarship lives in one person's memory.

None of this is carelessness. It is what happens when the tools on offer were designed for somewhere else.

02

Where it started.

Before Orkora, there were years spent designing and running social investment programmes: scholarships, grants, community projects. The hard question was never where the money should go. It was how to show, afterwards, that every decision had been fair.

The evidence existed, scattered across forms, spreadsheets and inboxes, but nothing tied a decision back to the evidence that produced it.

Givara was the first answer to that gap: a selection system where every score cites its evidence, where reviewers' disagreements are surfaced instead of averaged away, and where anyone who overrides the recommendation has to write down why.

03

How we build since.

Every product since has started the same way. Sit inside a real organisation. Watch where the work breaks. Build for that, and keep building until the people doing the work stop needing the workaround.

WHERE IT HAS LANDED

1 November 2026

FlockHarbor

FlockHarbor was built by observing how one church manages its members, guests, small groups and serving teams. That church has run on FlockHarbor since Sunday 1 November 2026, and it is the reference point for every church that follows.

June 2026

Kapex Flow

Kapex Flow was built to Nigerian tax rules from the first line. It took its first paying customer in June 2026.

WHO WE ARE

A Nigerian software company

Orkora Technologies Limited was incorporated in Nigeria in July 2026. Today the company runs 9 platforms across churches, small businesses, sponsors, events, beauty services, service businesses, manufacturing, real estate and football.

Each platform is its own product, with its own name, domain, terms and privacy policy. One company stands behind all of them, so a customer always knows who is accountable.

Registered name Orkora Technologies Limited	Registration number RC 9697234
Incorporated 21 July 2026	Company type Private company limited by shares

RC 9697234
Registered in Nigeria, July 2026

9 platforms
Each on its own domain, with its own terms

3 portfolios
Gatherings and communities, Business operations, Marketplaces

Built in Nigeria
For mobile-first, multi-currency African markets

HOW WE BUILD

Built for African conditions.

Local tax rules, WhatsApp as the channel people actually use, payments through local gateways, pricing in naira, and connections that are not always fast. A platform that works only on a good day is not finished.

The customer's name comes first.

An organiser's event page, a church's welcome page, a professional's storefront. Our products carry their users' names; ours stays in the footer.

Records that stand up to scrutiny.

A ledger posted from real payments, a batch traced from supplier to customer, an award with its evidence attached. Every system keeps an audit trail, because trust has to be provable.

Each product stands on its own.

Every platform has its own name, its own domain, its own terms and its own users. One company is accountable for all of them.

OUR PLATFORMS

9 platforms, 3 portfolios, one company

Gatherings and communities

Software for the people who bring others together: organisers, churches and the programmes that serve communities.

Orkora Events `orkora.events`

`Event brand infrastructure`

Ticketing, payments and event-day operations for organisers, carrying their brand from the first invitation to the last check-in.

Givara `givara.dev`

`Programme operating system`

Scholarships, grants and community programmes, run end to end on one auditable platform.

FlockHarbor `flockharbor.com`

`Church operating system`

A digital ministry office for churches: welcome guests, track attendance and care for members.

Business operations

Systems of record for the work businesses run every day: books, calls, plants and property deals.

Kapex Flow `kapexflow.app`

`Bookkeeping for Nigerian small businesses`

Books, invoices, payroll and tax in one place for Nigerian small businesses and early-stage teams.

AssembleOS `assembleos.vercel.app`

`Manufacturing operating system`

One configurable platform for the manufacturing value chain, from purchase to production to market.

Tari `tari-web.onrender.com`

`All Day Receptionist`

An AI receptionist that answers calls, books appointments and follows up, around the clock.

Terranova `terranova-web-alpha.vercel.app`

`Real estate process management`

Process management for real estate teams: deals, properties and the people working them.

Marketplaces

Places where clients and talent find each other, book and get paid.

GlowMall `glowmall.app`

`Beauty marketplace`

Find, compare and book trusted beauty professionals across Nigeria, at the salon, at home or at an event.

PLAYR `talentplayr.com`

`Football talent network`

The professional talent network for African football: verified player profiles, highlights and trials, so talent gets discovered by scouts and clubs.
